How to use this plan

Each scenario starts with a happy case (the user does it the right way, numbered 1.1, 1.2 …) followed by its sad cases (the user makes a mistake, leaves something out, types the wrong kind of value or tries something the role may not do, numbered 1.1a, 1.1b …). For every sad case the expected result is the exact message the system shows, so the tester can compare it word for word.

Words in brackets, such as (product) or (amount), stand for the value on the tester's screen. A "tooltip" is the small box the web browser shows next to a field that has to be filled in; its wording comes from the browser, not from FETCH.

Mark STATUS with the colours in the legend: green Passed, red Failed, amber In Progress, blank Open.

Set up before testing

- An administrator account.
- A product with 20 in stock, and a second product (for the duplicate SKU and name cases).
- A supplier with orders received in the last 12 months, a supplier whose orders all arrived late, and a supplier with no order received in that time.
- A purchase order waiting in the Orders view, a few sales, and another user account to deactivate.
- An email inbox you can open, for the 6-digit code when adding a user.
