How to read this plan

Each check starts with its happy case (the user does it the right way and it works), followed by its sad cases (the user does it wrong and the system stops them). DESCRIPTION is what the user does. For a sad case, EXPECTED RESULT gives the Problem first (the exact message the system shows) and then the Solution (what the user does to fix it).

The five checks

- Completeness check: a required field is left empty.
- Format check: the value is the wrong type or pattern, such as letters in a number field, an email without @, a phone number with letters, a file that is not a picture, or a password missing a kind of character.
- Range check: the value is too small, too large, too short or outside the allowed dates or limits, such as a password under 6 characters, a price of 0, a quantity above the stock, a date before today or a From date after the To date.
- Consistency check: two values have to agree, or the screen has to show and do what the records say, such as two passwords that must match, totals, filters and buttons.
- Database check: the value is compared with what is already saved, such as a SKU, barcode, username or supplier name already in use, a wrong password or code, or a link that has expired.

Words in brackets, such as (product) or (amount), stand for the value on the screen. A tooltip is the small box the web browser shows beside a field that must be filled in; its wording comes from the browser.
