How to read this plan

In each check, the first test case is done the right way and works; the test cases after it are done the wrong way and the system stops them. TEST CASE says what the test is for. DESCRIPTION is what the user does. EXPECTED RESULT is what the system shows or does.

The five checks

- Completeness check: a required field is left empty.
- Format check: the value is the wrong type or pattern, such as letters in a number field, an email without @, a phone number with letters, a file that is not a picture, or a password missing a kind of character.
- Range check: the value is too small, too large, too short or outside the allowed dates or limits, such as a password under 6 characters, a price of 0, a quantity above the stock, a date before today or a From date after the To date.
- Consistency check: the data shown is consistent. Each menu, tab, filter, chip or card shows exactly the records that belong there and none that do not (Low Stock lists only low-stock products, a supplier sees only its own orders, a voided sale is left out of the totals), and the same figure is the same on every page (Total Revenue on the Dashboard equals Total Sales Amount on Sales). Two fields that must agree, such as a password and its confirmation, are also checked here.
- Database check: what is saved is stored and read back correctly (a product, sale, supplier or user that is added, changed or removed), and a value is compared with what is already saved, such as a SKU, barcode, username or supplier name already in use, a wrong password or code, or a link that has expired.

Words in brackets, such as (product) or (amount), stand for the value on the screen. A tooltip is the small box the web browser shows beside a field that must be filled in; its wording comes from the browser.
